Freight shipping can open up new doors for your business — even if you don’t have time to classify each item. Our new freight box makes transporting less-than-truckload (LTL) shipments simple, with improved flexibility, increased security, and best of all — no freight classification.

You can find end-to-end rate quotes for the boxes quickly and accurately with the Get Rates & Transit Times tool. Whatever you’re shipping, this tool can help you compare rates and transit times to make an informed decision about your freight.

How It Works
1. Go to fedex.com. Click the Rate & Ship box on the main page, and then select LTL Rates under the Freight drop-down list.
2. Select the Freight Box account in the Account Information drop-down list; choose the appropriate Payment type.

Note: If you don’t yet have a FedEx Freight Box pricing agreement, please contact your FedEx account executive about how to sign up today.

3. Select US in the Country/Location field, enter the origin and destination ZIP codes, and complete all other required information in the From and To sections.

4. In the Service Type and Guarantees section, select your choice of FedEx Freight® Priority or FedEx Freight® Economy.
5. Enter the **Shipment Details**, ensuring that you select **Pallet/Skid** as the packaging type. Also, while **Weight** and **Class** are not a requirement for a FedEx Freight Box, these fields are still needed to generate a rate quote and process your shipment. Any numbers in this field will suffice and will not affect your rate either way.

**Note:** While you’re not required to know or submit the weight of your freight box shipment, all freight box shipments will be weighed by FedEx Freight to ensure shipments stay within transportation safety regulations. The maximum weight limit for the freight box is 1,200 lbs.

6. Use the **Additional Options** section to let us know if anything extra is required for your shipment. Check all options that apply to help ensure a more accurate rate quote.

7. In the **Schedule Pickup** section, choose your option. If you choose to **Schedule a pickup** now, then you’ll be prompted for those details after you finish the **Complete your shipment** section and click the **Create bill of lading** button. (See Step 10 below.)

8. Click the **Calculate** button within the **Rates & Transit Times** section to get a rate quote based on the completed information in the sections above.
9. The Rates & Transit Times results screen provides Delivery date, Transit Days, Service type, and accompanying Rate. It also enables you to:
- Open up and view the details of the rate quote by clicking the displayed rate amount.
- Print an individual rate quote by selecting the service and then clicking the Print icon.
- Modify your current quote to add or change details.
- Find out about even faster options for shipping your freight if the transit time quoted doesn’t fit your needs.

10. Click any of the applicable options within the Complete your Shipment section and then click the Create bill of lading button.

11. Confirm your shipment details.
